

# **MBQIP** Quality Measures Annual Report

Florida - 2019

# **Key Findings**

- Patient Safety/Inpatient Measures: The Patient Safety/Inpatient reporting rate of 91.7% for Florida in 2019 was lower than the national reporting rate of 95.3%. Compared with all CAHs nationally, CAHs in Florida scored significantly better on 0 measures, significantly worse on 2 measures, and did not have significantly different performance on the remaining 1 measure.
- Outpatient Measures: The Outpatient reporting rate of 66.7% for Florida in 2019 was lower than the national reporting rate of 86.8%. Compared with all CAHs nationally, CAHs in Florida scored significantly better on 1 measure, significantly worse on 0 measures, and did not have significantly different performance on the remaining 1 measure.
- Patient Engagement Measures: The HCAHPS reporting rate of 41.7% for Florida in 2019 was lower than the national reporting rate of 90.2%. Compared with all CAHs nationally, CAHs in Florida scored significantly better on 2 measures, significantly worse on 0 measures, and did not have significantly different performance on the remaining 8 measures.
- Care Transitions Measures: The EDTC reporting rate of 91.7% for Florida in 2019 was lower than the national reporting rate of 93.1%. Compared with all CAHs nationally, CAHs in Florida scored significantly better on 7 measures, significantly worse on 0 measures, and did not have significantly different performance on the remaining 1 measure.

# Background

The Medicare Beneficiary Quality Improvement Program (MBQIP) focuses on quality improvement efforts in the 45 states that participate in the Medicare Rural Hospital Flexibility (Flex) Program. Through Flex, MBQIP supports more than 1,350 small hospitals certified as rural Critical Access Hospitals (CAHs) in voluntarily reporting quality measures that are aligned with those collected by the Centers for Medicare and Medicaid Services (CMS) and other Federal programs. The Flex Monitoring Team (FMT) has been producing state-level annual reports on quality measures for over a decade, and this and future annual reports from the FMT will focus specifically on MBQIP measures using data collected under the four MBQIP domains: Patient Safety/Inpatient, Outpatient, Patient Engagement, and Care Transitions.

# Data and Approach

The data used for this report are reported to the CMS and extracted from QualityNet, or to the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN) annual survey. Emergency Department Transfer Communication (EDTC) data used for this report are from the Federal Office of Rural Health Policy as reported by CAHs to State Flex Programs. The data values in this report only include CAHs with a signed MBQIP Memorandum of Understanding (MOU).

Quality measures included in this report are limited to MBQIP measures, including: nine Patient Safety/Inpatient measures (HCP/IMM-3; Antibiotic Stewardship; ED-2b; CLABSI; CAUTI; SSI:C; SSI:H; MRSA; CDIFF), four Outpatient measures (OP-2; OP-22; OP-3b; OP-18b), ten Patient Engagement measures (from the Hospital Consumer Assessment of Healthcare Providers and Systems, or HCAHPS survey), and the Care Transitions (EDTC) measure. The six Healthcare-Associated Infections (HAI) measures (CLABSI; CAUTI; SSI:C; SSI:H; MRSA; CDIFF) are part of the MBQIP program, but not in the "core" measure set, and instead are a part of the "additional" measures set which is not required.

For each of the four domains, there are two sections of analyses: reporting and performance. Data are aggregated to the state and national levels. In all domains, data are not displayed for measures where the aggregated state or national data include fewer than 25 patients/cases/surveys.

Reporting identifies the number of CAHs reporting in each domain, and CAHs were considered reporting for any domain if they reported data in any quarter for any one measure with a denominator of one or more for that domain (indicating they had at least one patient, case, or survey for the applicable measure). Due to a lack of population and sampling data, these analyses did not include CAHs that may have reported a zero, since there is no way to determine if the zero was due to non-reporting or to a lack of an applicable population for a given measure. One exception to this is for the HAI measures, where we *include* data reported for these 6 measures where CAHs indicated they had a 0 denominator (0 patients in 2019 that would fall under any of these HAI categories). The reporting denominator of all CAHs in the U.S. for 2019 is 1,351 CAHs (the total number of CAHs designated on December 31, 2019), and the reporting numerator includes all CAHs with a signed MBQIP MOU reporting for the specific domain or measure. Please see the Appendix for additional information about the calculation for performance score values and statistical testing in each domain.

# Patient Safety/Inpatient Domain

## CAH Reporting

### Results

The percent of CAHs reporting Patient Safety/Inpatient quality data varied considerably across states. In Florida, 91.7% of 12 CAHs reported data on at least one Patient Safety/Inpatient quality measure in 2019, and Figure 1 displays data for 2016-2019 among CAHs in four groups: those in Florida, all CAHs nationally, other states with a similar number of CAHs as Florida, and other states located in the same Health Resources and Services Administration (HRSA) geographic region as Florida. Table 1 compares the Patient Safety/Inpatient reporting rates of CAHs in Florida to those located in the other 44 states participating in the Flex Program as well as the rate for all CAHs nationally. The Florida CAH Patient Safety/Inpatient reporting rate of 91.7% ranks #36 nationally. The number of CAHs reporting individual quality measures may differ by measure for several reasons. Some measures only apply to a portion of patients; others exclude patients with contraindications, or only apply to conditions not treated or procedures not performed in some CAHs.

## Figure 1: Percentage of CAHs Reporting at Least One Patient Safety/Inpatient Measure

Table 1: State Ranking of CAH Reporting Rates for Patient Safety/Inpatient Quality Measures, 2019

### Results

Tables 2-4 display the results for performance of CAHs on Patient Safety/Inpatient measures for Florida and all CAHs nationally. Table 3 displays results for median time measures (lower scores, indicating shorter median times, are better). Table 4 displays HAI measures, including SIR performance results. Comparisons to other states are not provided for HAI measures because the majority of states did not meet the conditions for statistical comparisons. Compared with all CAHs nationally, CAHs in Florida scored significantly better on 0 measures, significantly worse on 2 measures, and did not have significantly different performance on the remaining 1 measure. The six HAI measures in this domain are not included in these totals since we are not able to perform statistical testing on HAI measures.

# Table 2: Patient Safety/Inpatient Quality Measure Results in Florida and All CAHs Nationally, 2019

	Significantly better than all CAHs nationally	Significa	antly worse than al	l CAHs nationa	lly
		FL CAHs (n=12)		All CAHs (n=1,351)	
Measure	Description	CAHs reporting	Performance $\% \{1\}\{2\}$	${f CAHs}$ reporting	Performance % {2}
HCP/IMM- 3	Healthcare workers given influenza vaccination	6	80.2	719	91.5
Antibiotic Stewardship	Fulfill antibiotic stewardship core elements	7	85.7	1,077	79.9

#### Footnotes:

**{1}** Rates without highlights were not significantly different from comparable rates in all CAHs nationally.

**{2}** HCP/IMM-3 is expressed as the percentage of health care workers immunized, and Antibiotic Stewardship is the percentage of CAHs fulfilling all antibiotic stewardship core elements.

\* Indicates insufficient data to calculate rate (<25 patients)

# Table 3: Patient Safety/Inpatient Median Time Quality Measure Results in Florida and AllCAHs Nationally, 2019

Significantly better than all CAHs nationally		Significant	<i>v</i>		
		FL CAHs (n=12)		All CAHs (n=1,351)	
Measure	Description	CAHs reporting	$\begin{array}{c} \text{Minutes} \\ \{1\} \end{array}$	CAHs reporting	Minutes
ED-2b	Admit decision time to ED departure time for admitted patients	6	72.2	1,063	43.0

#### Footnotes:

 $\{1\}$  Median minutes to receiving care. Lower is better for all measures. Rates without highlights were not significantly different from comparable rates in all CAHs nationally.

\* Indicates insufficient data to calculate rate (<25 patients)

		${ m FL~CAHs}\ { m (n=12)}$		$\begin{array}{c} \text{All CAHs} \\ \text{(n=1,351)} \end{array}$	
Measure	Description	CAHs reporting	$\frac{\text{SIR}}{\{1\}}$	CAHs reporting	SIR
HAI-1	Central-line-associated bloodstream infections (CLABSI)	11	*	1,028	0.5
HAI-2	Catheter-associated urinary tract infections (CAUTI)	11	0.6	1,106	0.6
HAI-3	Surgical site infections from colon surgery (SSI:C)	4	*	436	1.0
HAI-4	Surgical site infections from abdominal hysterectomy (SSI:H)	4	*	415	1.2
HAI-5	Methicillin-resistant Staphylococcus Aureus (MRSA) infections	8	*	693	0.5
HAI-6	Clostridium difficile (C.diff) intestinal infections	8	0.4	792	0.8

# Table 4: Healthcare-Associated Infection Measures Reported by CAHs in Florida and AllCAHs Nationally, 2019

### Footnotes:

**{1}** SIRs are a ratio of the total number of infections observed in 2019 divided by the predicted number of annual infections.

 $\boldsymbol{*}$  Indicates insufficient data to calculate SIR

- Indicates no data available for this measure

Note: Significance tests for HAI Measures are not included as statistical tests are not able to be performed on these data.

# **Outpatient Domain**

# CAH Reporting

### Results

The percent of CAHs reporting Outpatient quality data varied considerably across states. In Florida, 66.7% of the 12 CAHs reported data on at least one Outpatient quality measure in 2019, and Figure 2 displays data for 2016-2019 among CAHs in four groups: those in Florida, all CAHs nationally, other states with a similar number of CAHs as Florida, and other states located in the same HRSA geographic region as Florida. Table 5 compares the Outpatient reporting rates of CAHs in Florida to those located in the other 44 states participating in the Flex Program as well as the rate for all CAHs nationally. The Florida CAH Outpatient reporting rate of 66.7% ranks #41 nationally. The number of CAHs reporting individual quality measures may differ by measure for several reasons, other than missing data. Some measures may only apply to a portion of patients; others exclude patients with contraindications, or only apply to conditions not treated or procedures not performed in some CAHs.

### Footnotes:

**{1}** Listed n values refer to most recent data (2019) only

**{2}** Group includes states with 10-19 CAHs: AK(13), AZ(15), ME(16), NH(13), NM(10), NV(13), NY(18), PA(15), TN(15), UT(13), WY(16)

**{3}** HRSA Region B includes: AL(5), GA(30), KY(28), MS(31), NC(20), SC(4), TN(15)

# Patient Engagement Domain

# CAH Reporting

### Results

Figure 3 compares reporting rates from 2016-2019 in the Patient Engagement domain (HCAHPS) over time among four groups of CAHs: those in Florida, all CAHs nationally, those located in other states with a similar number of CAHs, and those located in the same HRSA geographic region as Florida. The HCAHPS reporting rate of 41.7% for Florida CAHs was lower than the national reporting rate of 90.2%.

The number of completed HCAHPS surveys per CAH in Florida and nationally in the five survey completion and three survey response rate categories reported by CMS are shown in Table 8. Hospitals with 100 or more completed HCAHPS surveys over a four-quarter period receive HCAHPS Star Ratings from CMS. CMS recommends that each hospital obtain 300 completed HCAHPS surveys annually, in order to be more confident that the survey results are reliable for assessing the hospital's performance. However, some smaller hospitals may sample all of their HCAHPS-eligible discharges and still have fewer than 300 completed surveys. Caution should be exercised in comparing HCAHPS results for states that have few CAHs reporting results and/or CAHs whose results are based on fewer than 100 completed surveys.

Table 9 compares the HCAHPS reporting rates of CAHs in Florida to those located in the other 44 states participating in the Flex Program as well as the rate for all CAHs nationally. The Florida HCAHPS reporting rate of 41.7% ranks #44 nationally.

### Results

Table 10 displays the results for performance on Patient Engagement (HCAHPS) measures for Florida and all CAHs nationally. Compared with all CAHs nationally, CAHs in Florida scored significantly better on 2 measures, significantly worse on 0 measures, and did not have significantly different performance on the remaining 8 measures.

## Table 10: HCAHPS Results for CAHs in Florida and All CAHs Nationally, 2019

Significantly better than all CAHs nationally

Significantly worse than all CAHs nationally

	Average percentage of patients that gave the highest level of response (e.g., "always")			
HCAHPS Measure	${ m FL~CAHs} { m (n=12)}$	$\begin{array}{c} \text{All CAHs} \\ \text{(n=1,351)} \end{array}$		
CAHs reporting	n=5	n=1,219		
Nurses always communicated well	86.7	84.6		
Doctors always communicated well	82.7	85.2		
Patients always received help as soon as wanted	73.5	77.2		
Staff always explained medications before giving them to patients	72.1	69.8		
Staff always provided information about what to do during recovery at home	92.8	89.1		
Patients strongly understood their care when they left the hospital	58.3	57.3		
Patient's room and bathroom were always clean	81.1	81.7		
Area around patient's room was always quiet at night	74.7	66.4		
Patient gave a rating 9 or 10 [high] on a 1-10 scale	78.9	78.1		
Patient would definitely recommend the hospital to friends and family	78.6	76.2

# **Care Transitions Domain**

## CAH Reporting

### Results

Figure 4 compares reporting in the Care Transitions domain (EDTC) for Florida and all CAHs nationally for 2019. 91.7% of Florida CAHs reported the EDTC measure. Only 2019 data are included in this report due to the lack of historical data on EDTC in previous FMT reports. In addition, collection and reporting procedures for the EDTC measure changed beginning in 2020. Future reports will include only data for the new measure. Table 11 compares the EDTC reporting rates of CAHs in Florida to those located in the other 44 states participating in the Flex Program as well as the rate for all CAHs nationally. The Florida EDTC reporting rate of 91.7% ranks #34 nationally.

# Appendix

This appendix includes additional detailed information regarding the methods and data used in this report. Performance for each measure is shown in a variety of ways depending on the measure.

**Percentages** are calculated using the number of patients (or healthcare workers for the measure HCP/IMM-3) who meet the measure criteria, divided by the number of patients or workers in the measure population, which are specifically defined for each measure. For antibiotic stewardship measures, this report shows the percentage of CAHs in your state that met the seven elements individually, as well as the percentage that met all elements. Values are rounded to the nearest decimal place. State performance was compared to the performance for all CAHs nationally using Chi-square tests (p < 0.05). The results of the state performance comparisons were classified as: 1) insufficient data (less than 25 total patients); 2) not significantly different that all CAHs nationally; 3) significantly better than all CAHs nationally; or 4) significantly worse than all CAHs nationally.

**Median time** includes the median number of minutes until the specified event occurs among patients who meet certain criteria, which are specifically defined for each measure. For median time measures, lower scores, indicating shorter median times, are better. Wilcoxon-Mann-Whitney tests were used to compare the median times for CAHs in each state to all CAHs nationally.

Antibiotic stewardship performance was measured as the percentage of CAHs that fulfilled all seven core elements of an antibiotic stewardship program. The questions in the NHSN address different activities CAHs can participate in to fulfill the core elements. The state-level performance on antibiotic stewardship was compared to the performance of all other CAHs nationally using Fisher's exact test.

**Performance for each HAI measure** was calculated using Standardized Infection Ratios (SIRs). SIRs are a ratio of the total number of infections observed in 2018 divided by the predicted number of annual infections. Predicted number of infections data are calculated and made available by the CDC. SIRs can only be calculated when there are one or more predicted infections for the time period. A lower SIR indicates better performance. Significance tests comparing state HAI performance to the performance all CAHs nationally were not performed because the majority of states did not meet the conditions for statistical comparisons: at least one predicted infection and the state's predicted number of infections multiplied by the SIR of all other CAHs must be equal to or greater than one.

For each **HCAHPS measure**, the percentages of patients reporting the highest response (e.g., "always") on each measure were summed and averaged across all reporting CAHs within a state and all CAHs nationally. Two-sample t-tests were used to compare whether the mean scores on each measure are significantly different between CAHs in each state and all CAHs nationally.

**Performance for the EDTC measure** was calculated as the percentage of patients that met all of the seven data elements. State performance was compared to the performance for all CAHs nationally using Chi-square tests (p < 0.05). Changes to the EDTC measure in 2020 included adjustments to help streamline and modernize the measure, including a reduction in the total number of data elements from 27 to 8 and clarifications to specific definitions of individual data elements.
